

Types of LD

Learning disabilities (LD) are neurological disorders that can make it difficult to acquire certain academic and social skills. They are not the result of poor intelligence or laziness. Knowledge about LD will allow you and your child to advocate for success in learning and life. Find out more by exploring the sections below.

Learning disabilities are not caused by economic disadvantage, environment factors, or cultural differences.

General LD info

A learning disability is more than a difference or difficulty with learning it's a neurological disorder.

Dyslexia

This language processing disorder can hinder reading, writing, spelling and something even speaking.

Dyscalculia

Dyscalculia refers to a wide range of lifelong learning disabilities involving math.

Dysgraphia

This LD affects writing and can lead to problems with spelling, poor handwriting, and putting thoughts on paper.

Dyspraxia

Dyspraxia, a disorder that affects motor skill development, often coexists with learning disabilities.

Executive Functioning

Many people with LD struggle with executive function, which governs your ability to plan, organize, and manage details.

ADHD & Other Issues

Although not learning disabilities, Attention-Deficit/Hyperactivity Disorder and other disorders are not uncommon among people with LD.
